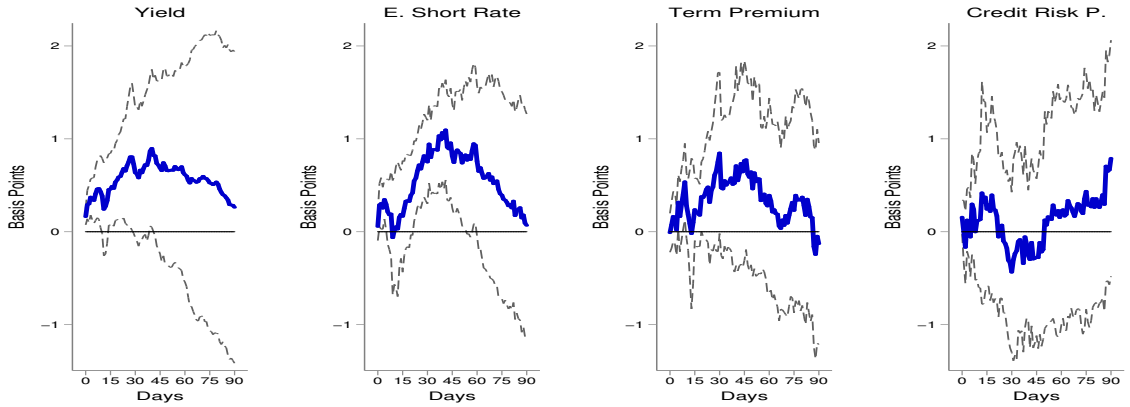
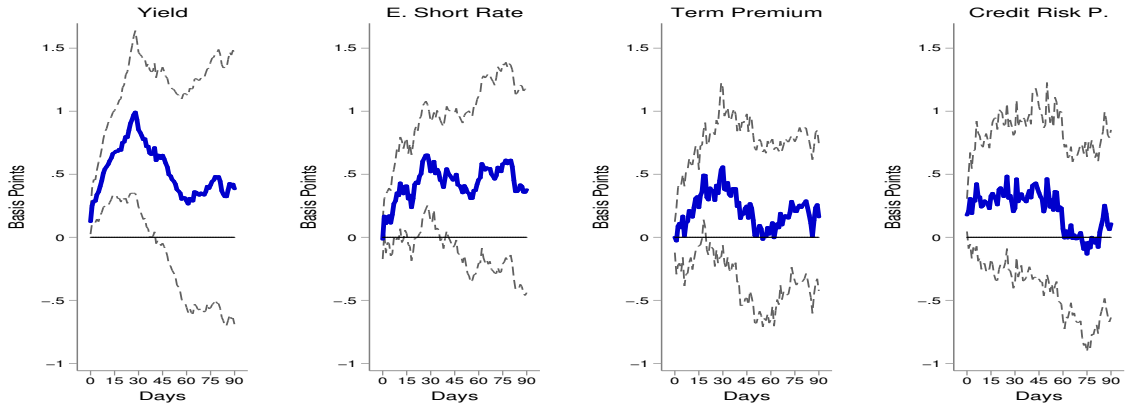
Notes: This table reports the average, the standard deviation, the minimum and the maximum values on monetary policy announcement days for the target, path and LSAP shocks, see section **??** for the definitions. Target shocks are considered from 2000 to 2008, LSAP shocks are considered from 2009 to 2019, and path shocks span the whole sample period.

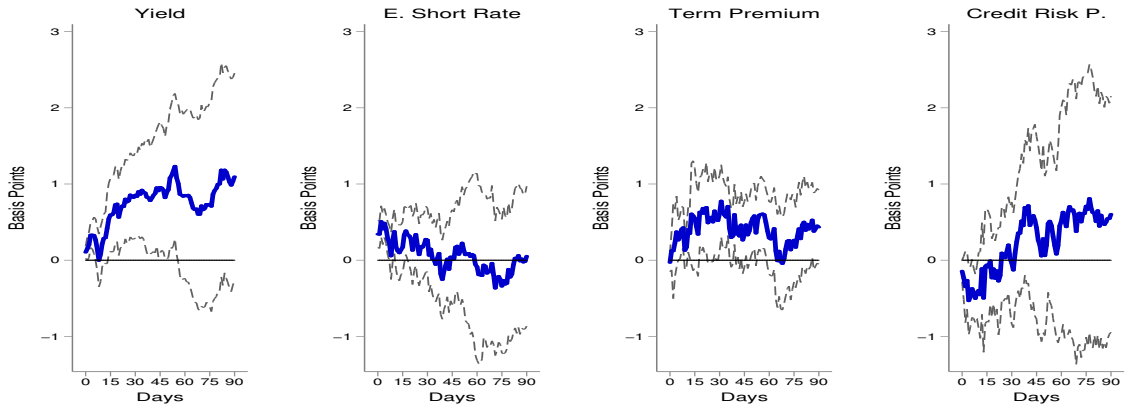
Figure 1. Response of 2-Year Emerging Market Yield to U.S. Monetary Policy Shocks



(a) Target Shock: 2000-2008



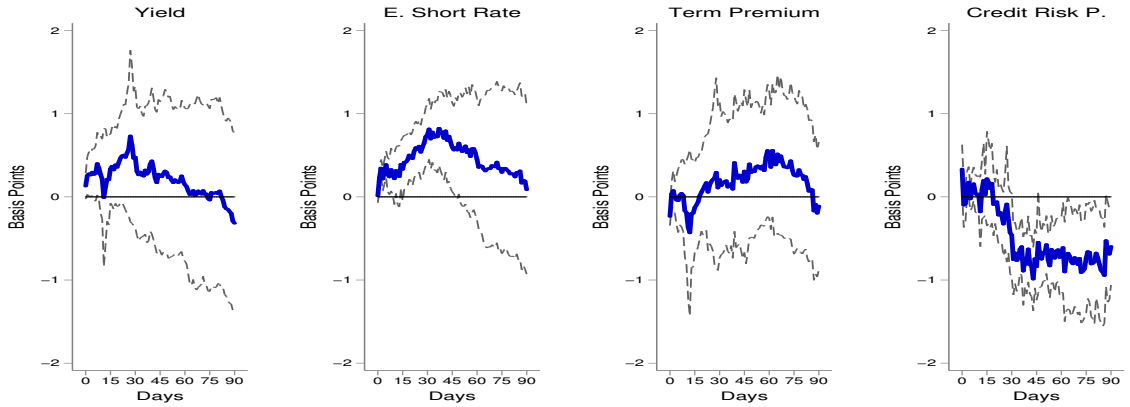
(b) Path Shock: 2000-2019



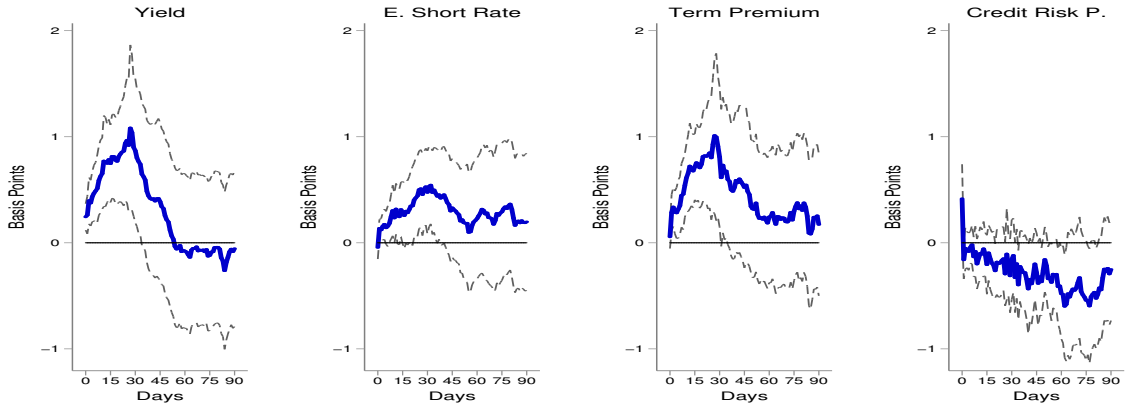
(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 2-year emerging market nominal yield and its components to U.S. monetary policy shocks. The nominal yield is decomposed into an expected future short-term interest rate (ER), a term premium (TP) and a credit risk premium (CRP). The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.

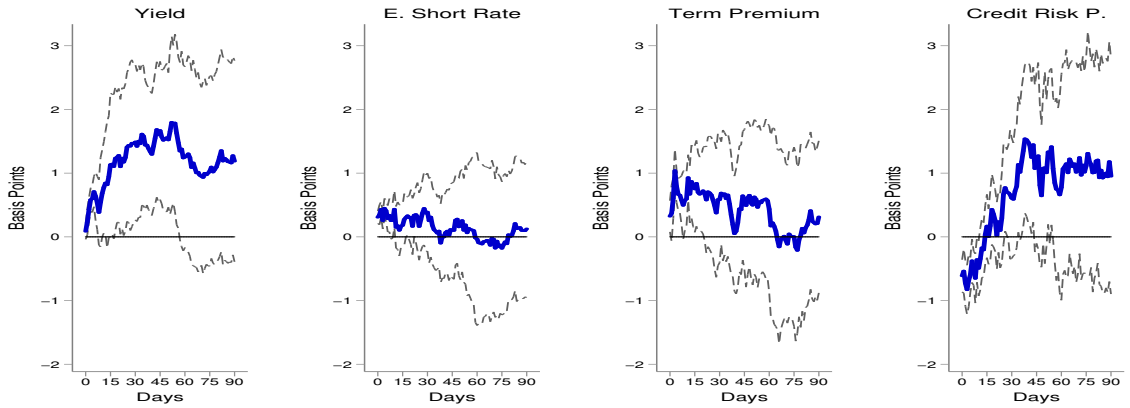
Figure 2. Response of 10-Year Emerging Market Yield to U.S. Monetary Policy Shocks



(a) Target Shock: 2000-2008



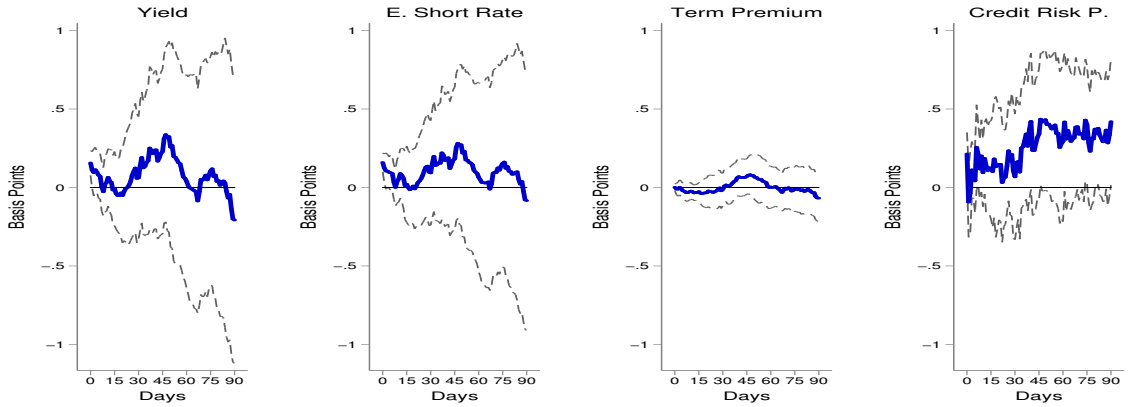
(b) Path Shock: 2000-2019



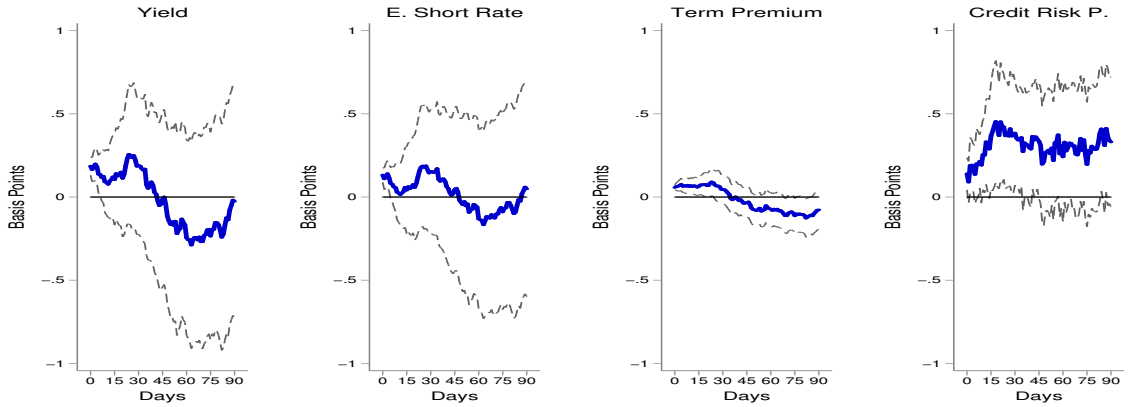
(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 10-year emerging market nominal yield and its components to U.S. monetary policy shocks. The nominal yield is decomposed into an expected future short-term interest rate (ER), a term premium (TP) and a credit risk premium (CRP). The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.

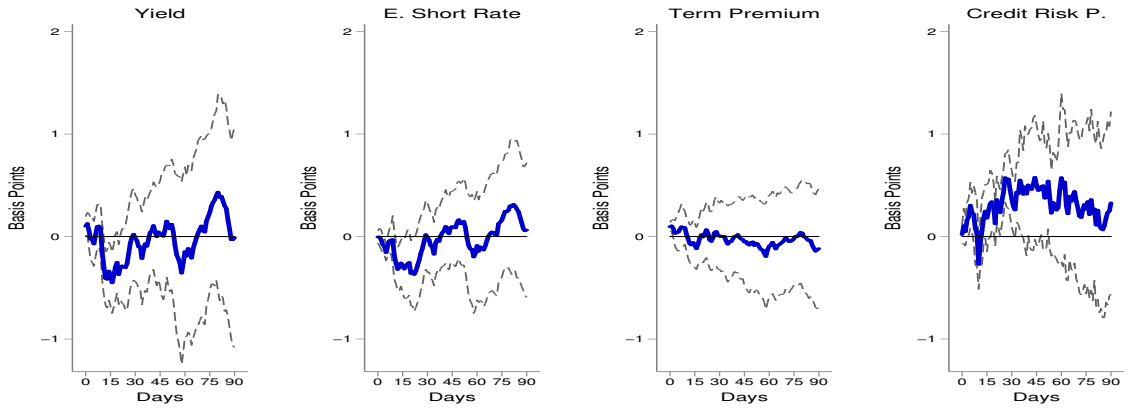
Figure 3. Response of 2-Year Advanced Country Yield to U.S. Monetary Policy Shocks



(a) Target Shock: 2000-2008



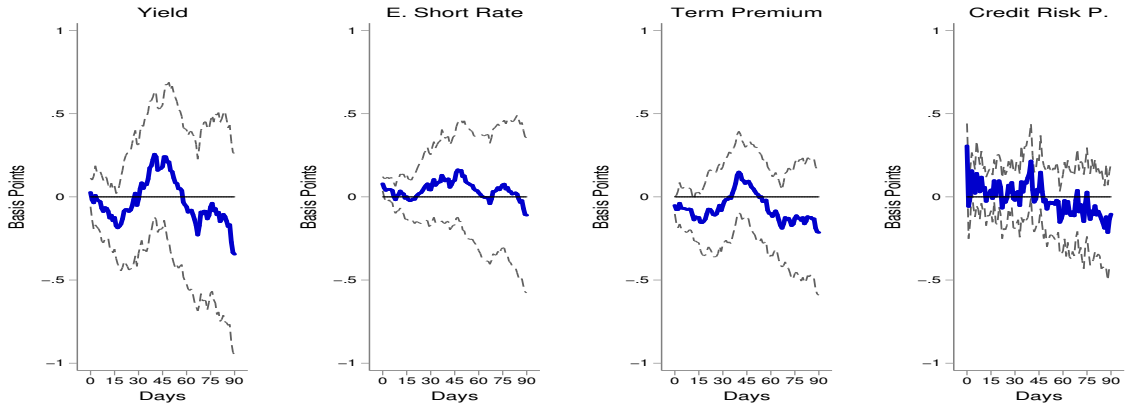
(b) Path Shock: 2000-2019



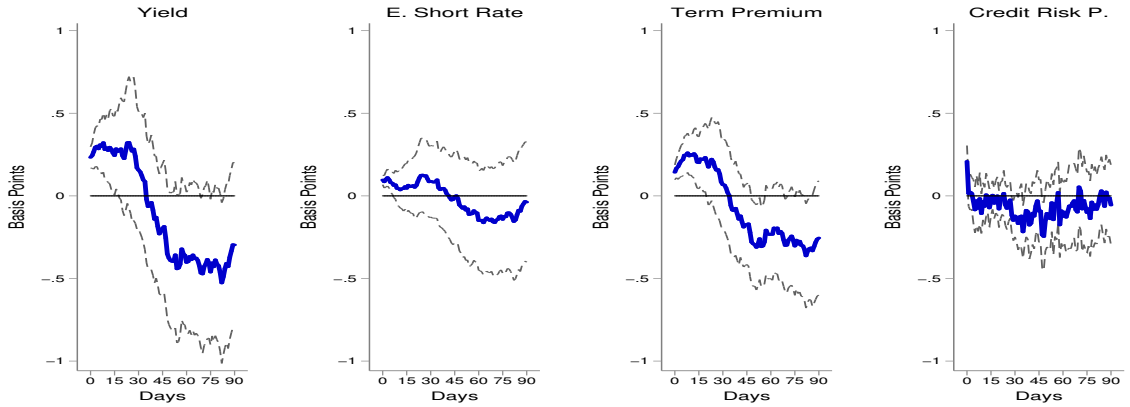
(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 2-year advanced country nominal yield and its components to U.S. monetary policy shocks. The nominal yield is decomposed into an expected future short-term interest rate (ER) and a term premium (TP). The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.

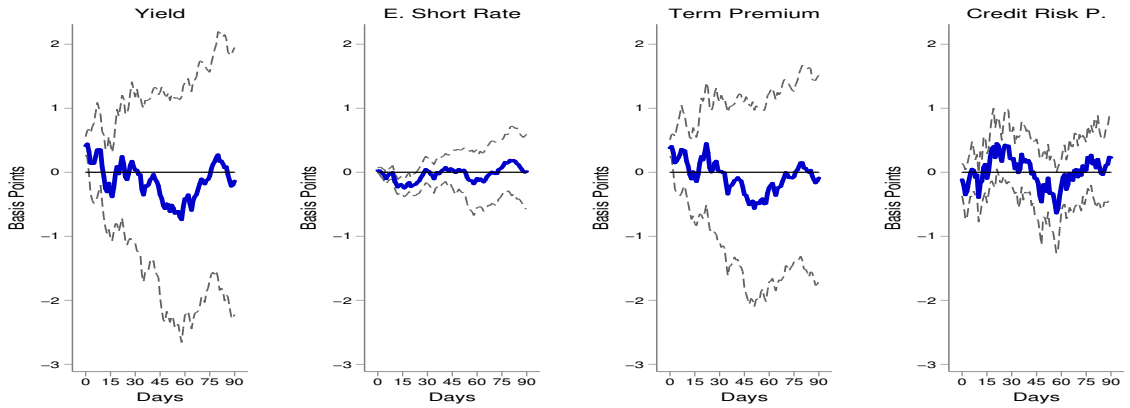
Figure 4. Response of 10-Year Advanced Country Yield to U.S. Monetary Policy Shocks



(a) Target Shock: 2000-2008



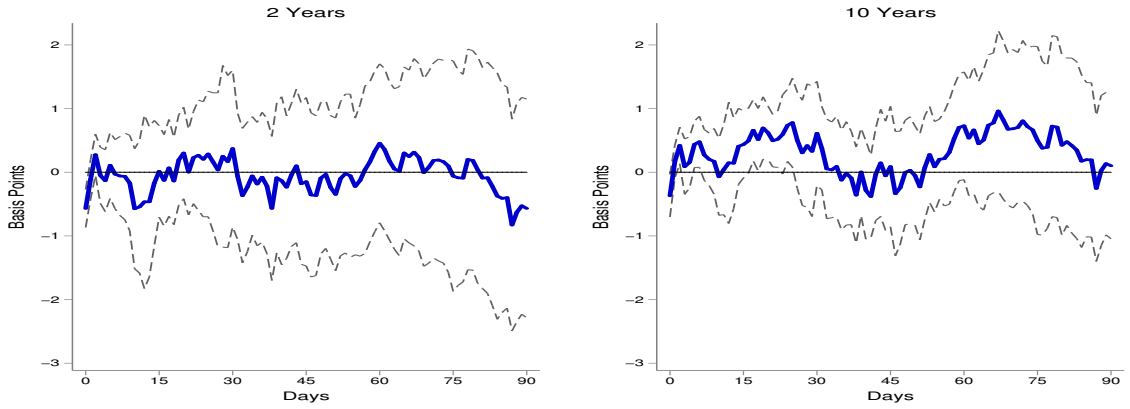
(b) Path Shock: 2000-2019



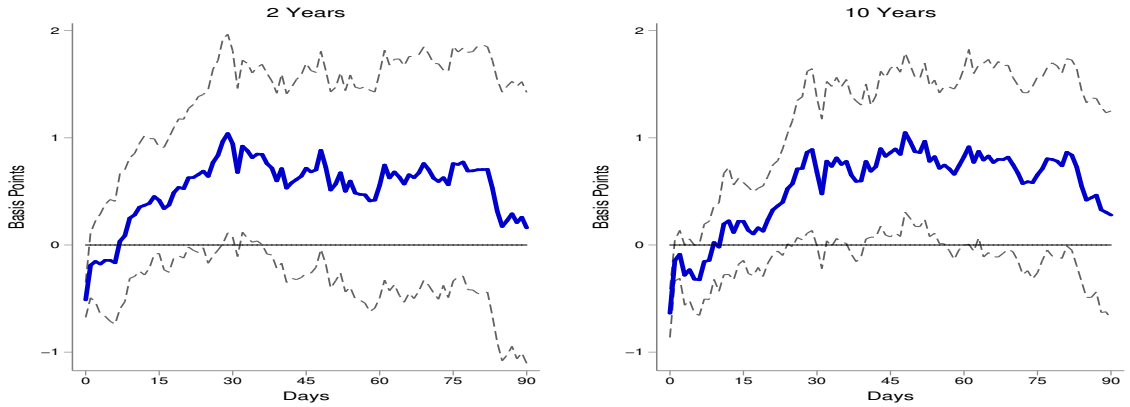
(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 10-year advanced country nominal yield and its components to U.S. monetary policy shocks. The nominal yield is decomposed into an expected future short-term interest rate (ER) and a term premium (TP). The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.

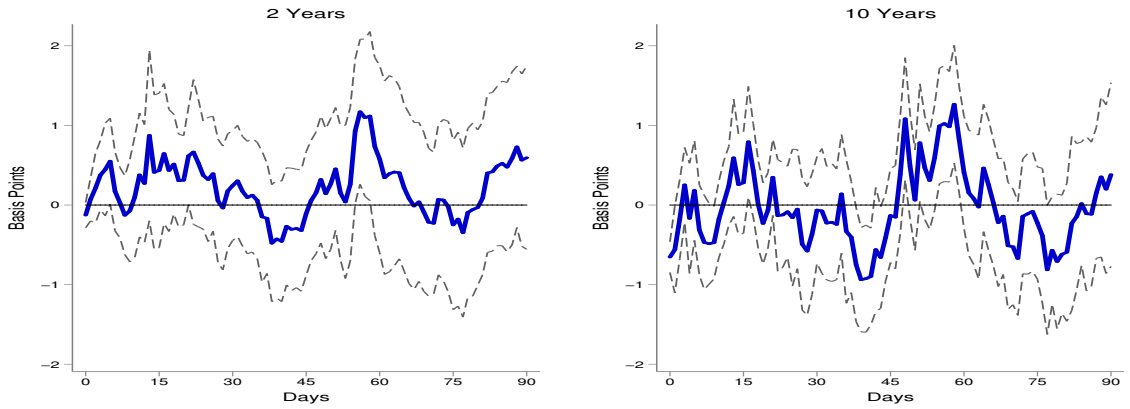
Figure 5. Response of the Forward Premium to U.S. Monetary Policy Shocks: EM



(a) Target Shock: 2000-2008



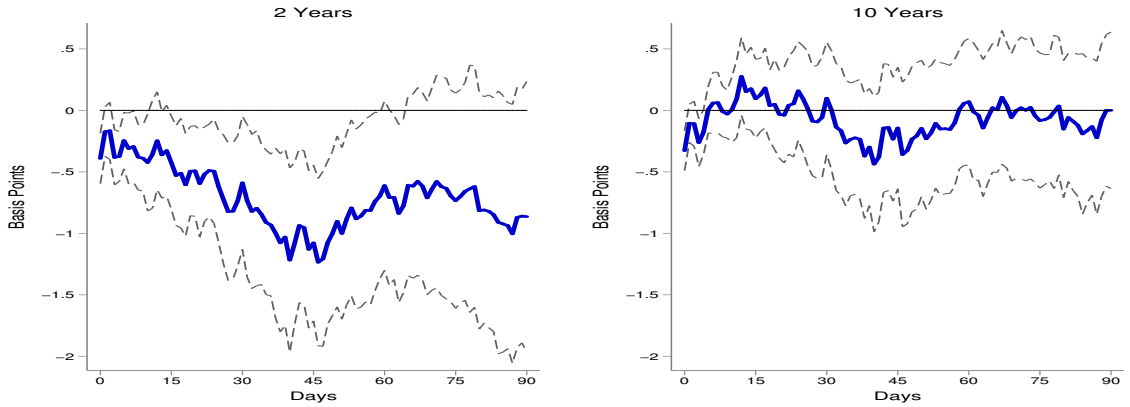
(b) Path Shock: 2000-2019



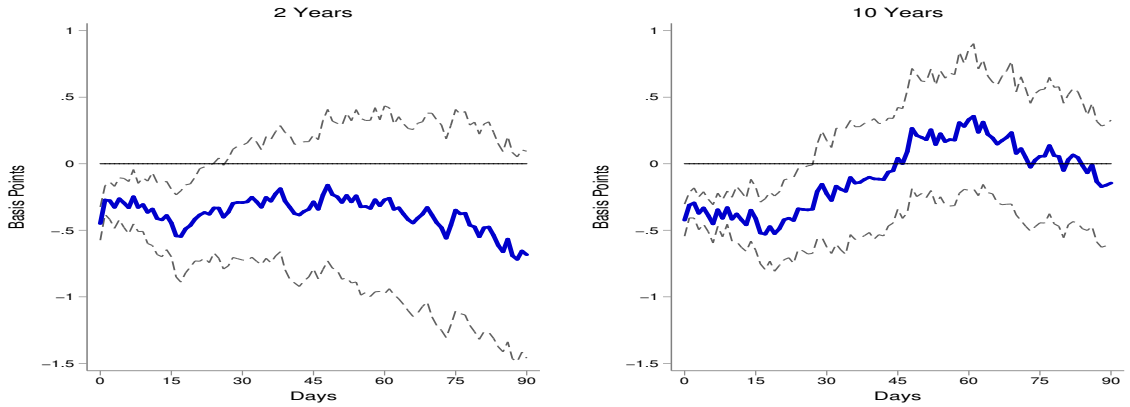
(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 2- and 10-year forward premium for emerging markets (EM) to U.S. monetary policy shocks. The forward premium is calculated using cross-currency swaps, which are in turn constructed using cross-currency basis swaps and interest rate swaps, see section **??** for details. The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.

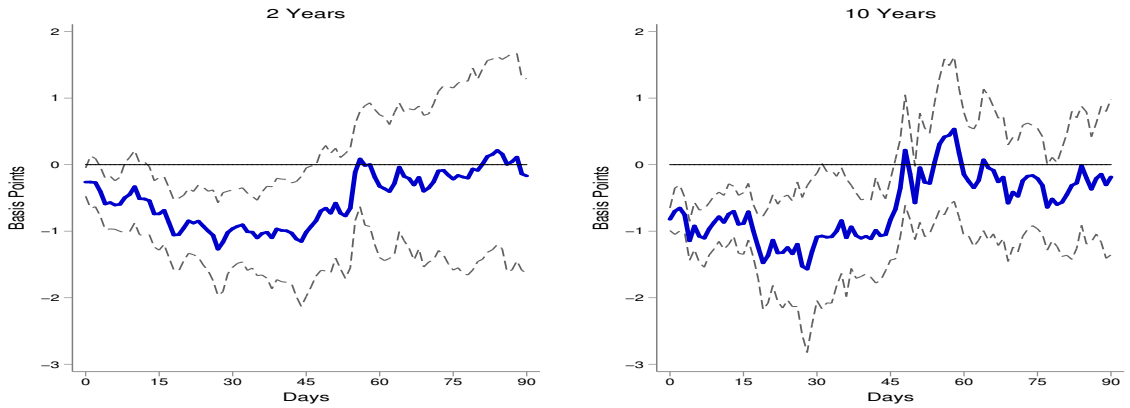
Figure 6. Response of the Forward Premium to U.S. Monetary Policy Shocks: AE



(a) Target Shock: 2000-2008



(b) Path Shock: 2000-2019



(c) LSAP Shock: 2009-2019

Notes: This figure shows the response following **?** of the 2- and 10-year forward premium for advanced countries (AE) to U.S. monetary policy shocks. The forward premium is calculated using cross-currency swaps, which are in turn constructed using cross-currency basis swaps and interest rate swaps, see section **??** for details. The target, path and LSAP shocks are identified using high-frequency data around Fed's monetary policy announcements, see section **??** for details.
